

## Revenue plan (how much you can generate) — simple 12-month model

I'll use a clean “base case” with realistic SMB conversion.

### Assumptions (base case)

- Average paid plan: **₹999/month** (mix of Starter/Growth/Pro)
- Churn: **3% monthly** after stabilization
- 30% of customers pay onboarding average **₹10,000** (one-time)
- Multi-tenant infra cost starts **₹15k/month**, scales slowly

### Target customer growth plan

- Month 1–3: 20 → 80 customers (pilots + referrals)
- Month 4–6: 80 → 250 customers (CA/partners)
- Month 7–12: 250 → 800 customers (repeatable channel + inside sales)

### What that produces (rough)

- **MRR at 250 customers:**  $250 \times ₹999 \approx ₹2.5\text{L/month}$
- **MRR at 800 customers:**  $800 \times ₹999 \approx ₹8.0\text{L/month}$
- **Onboarding revenue (30% of 800 × ₹10k):**  $\approx ₹24\text{L one-time}$  over the year (timing depends on sales)

### Profitability (early-stage reality)

- If monthly operating cost (infra + minimal support) is **₹1L/month**, then at:
- **250 customers** you're near breakeven / small profit
- **800 customers** you have strong margins (software gross margin is high)

---

## How you'll actually get customers (go-to-market)

### Phase 1 (0–60 days): Paid pilots

- Target: shops that already take orders on WhatsApp + do invoices manually
- Offer: **₹10k onboarding + 2 months free**, then ₹999/month
- Goal: 20–50 paying customers + testimonials

### Phase 2 (2–6 months): Partner channel

- Sign **10 CA/Tally service partners**

- Give **20% recurring commission**
- Partners bring customers because it reduces their clients' daily operational pain

### **Phase 3 (6–12 months): Repeatable scale**

- Standardized onboarding checklist + training videos
  - Inside sales + WhatsApp demos
  - Cluster approach: textile traders, stationery wholesalers, small distributors, commission agents
- 

### **Judge-friendly “why this will make money”**

- **High pain + low switching barrier:** customers can start with just products + orders + invoice.
- **Clear ROI:** prevents stockouts, reduces manual invoice time, improves customer updates.
- **Expandable:** automations + announcements + database builder upsells naturally.
- **Defensible angle vs Zoho/Tally:** they are accounting-first; TNImpact is **operations-first + low-code customization**.
